Project 2 Status Report 3

Things we accomplished
- Clare:
    - Created compiled JSON file, combining weather and wines data into a format that allows us to access data by county then by year
- Shirley:
    - Created clickable map that allows user to select county and slider allow user to select the vintage year to pass relevant data to image plotting functions
- Michael:
    - Created image plotting for weather data, decile scale for average rain and average temperature that maps to image sizing, quintile scale for the number of rainy days that maps to cloud number, and contextual clues to discern seasons
    - Create image plotting for wine vintage data, maps vintage score to fill of the wine glass, integratable for multiple number of wines
- All:
    - Compiled all functionality into one document
    - Finishing touches choosing fonts and page layout
    - Created key allowing users to read the plot
    - Completed write up

Things to complete for submission
- None, receive feedback and improve accordingly, if extension is granted evaluate room for improvement by declustering svgs to reduce scrolling
